

CDC BALER

Forage Oat

Forage Oat

CDC Baler is a well adapted forage oat with high silage yields. It is a tall oat with a long season maturity that contributes to its excellent forage yields.

Insights

"CDC Baler can be used as a silage, swath grazed or in combination with other legumes such as 40-10 forage peas."

- Herman Wehrle PAg., Director of Market Development, FP Genetics Inc.

Highlights

- High yielding forage
- Tall plant structure
- Long season maturity

Adaptability

CDC Baler is suited to all the growing regions in Western Canada where oats are grown for forage silage.
